Sample of MetaData Query Screen

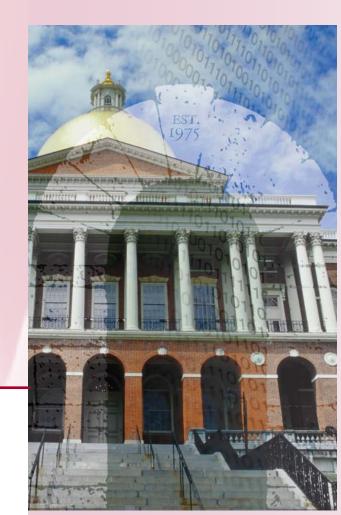

"MetaData" - Enterprise specified framework for defining and naming data fields in a manner most useful to end-users. Keystone Client<sup>™</sup> brings the powerful benefits of relational database technology to even the casual user. Keystone Client<sup>™</sup> provides your organization with the ability to define data libraries (called MetaData Tables) that will now be useful to those who need specific information on demand. With this capability, you are able to select the types of data most meaningful to your users and then organize it in ways, and with names, that make sense to the user!

#### Announcing the next generation of Keystone application software for Public School and Local Government Administration.

Maple Shade, NJ, June, 2006—Keystone Client<sup>™</sup>, a new desktop environment designed for use with all current version Keystone application software products, provides an exciting new navigational and visual approach to Keystone's proven application suites. It also provides powerful integration with PC desktop applications which allows users to easily get the data they need – on their own terms.

"Keystone Client<sup>™</sup> provides an even better way to use our featurerich application software and take full advantage of the power of popular office productivity products," sites Judd VanDervort, Jr., President of Keystone Information Systems, Inc.

Keystone Client<sup>™</sup> is both an intuitive user interface and a powerful tool for data manipulation. It provides a consistent and familiar Windows<sup>®</sup> interface throughout all of Keystone's proven application software for school and local government administration. Keystone Client also more fully capitalizes on the strengths of the Windows desktop environment, integrating the Microsoft Office products, and other familiar desktop tools directly into the Keystone system experience. And Keystone Client includes its own user friendly reporting capability which provides access to the database fields organized and named in a way to be most relevant to different types of users of the application.

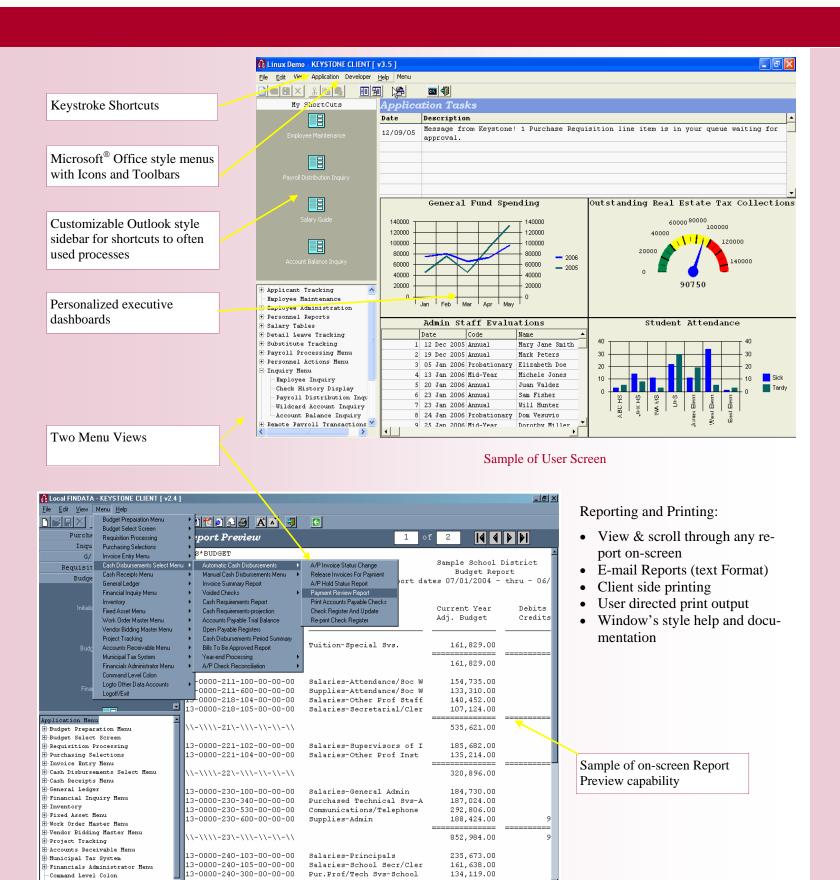

Keystone Information Systems, Inc., established in 1975, provides comprehensive, packaged information systems solutions to public school districts and local governments, including product fit consulting; training; software customization; hardware and network integration; and on-going support.
